# Adding and Subtracting in Measurement

You can use addition and subtraction to solve problems with measurements.

How much longer is the snake than the worm?

Think: Subtract to compare.

$$\underline{18} - \underline{6} = \underline{12} \quad \underline{12} \text{ in. longer}$$

Solve each problem.

Write a number sentence. Then write the solution.

1. What is the distance around the flat surface of the game box?

$$\underline{30} + \underline{15} + \underline{\quad} = \underline{\quad}$$

Distance around: \_\_\_\_\_ cm

2. **Writing in Math** Did you add or subtract in Exercise 1? Explain.
