Jackson High School Robotics team came on strong this season with 2 wins. Week one we competed against Glacier Peak and 37 teams ending up in the first seed and the captain of the winning Alliance. This week our team was ranked second in the world for ELO points a metric that measures all aspects of the robot and team performance. Week two West Valley District event we made some tweaks and improved the accuracy of our shots we again were on the winning alliance and were ranked first in the world with our ELO metric. I am so proud of the skill of the drive team: Tim Tien, Ryan Patricelli, Bryce Howard, Francis Lara and drive coach Patrick Woolfenden. They once again impressed our opponents with the speed of our bot and the accuracy of programming. Our programmers did their math to utilize the vision targeting taking into account the magnus effect of the ball to score 7 balls during the autonomous period impressing the judges and earning an Autonomous award at both District Events.

Competitive Rankings and FRC Elo

All teams start at 2500, and their rank is adjusted up and down depending on a few factors, including: Win/loss/tie, Win Streaks, and Winning Margin. This is done using the Elo ranking system. The maximum rating is 5000, and the minimum 0.

Please congratulate members of this team for all of their efforts in the design, fabrication, and coding of a champion robot below are the current members of Jack In The Bot Team 2910:
