

March 24, 2020

Today our afternoon adventure took creating to a new level. We made cotton ball launchers! The boys love doing science experiments and making things, so we took some items we had around the house, a video from YouTube, and made a new creation. This was a pretty short project, but it was fun and provided LOTS of entertainment after it was done. The only thing we were missing was cotton balls! So, we improvised and used napkins torn and squished into balls instead. There is always a way to make things work!

If you are interested in making your own cotton ball launcher, here is the link:

Here are some photos:

We gathered our supplies, worked together to build and built on our own. The boys were SUPER happy with how their launchers turned out! They had a great time figuring out how far they could shoot the napkin balls and if aiming was actually possible.
