

3 PHILO THE WONDER PARROT

Extra Credit!

Philo, known as "The Wonder Parrot" to his audiences, is the pride of Athena City's Zoological Society. He has the ability to verbally identify many different objects and colors. At a recent Society Exhibition, he was shown five different objects and asked to identify them. He was then asked to identify the color of each object. Each object was a different color. When he identified both the object and the color correctly, he was given one of his five favorite foods. Each food was given as a reward for a different object. From the information provided, determine the order in which he was asked to identify each object (one was a pyramid), the color of each object (one was orange), and the food that was to be a reward for the correct identification of each object (one was raisins).

1. Philo was shown the yellow object immediately after the ball and immediately before the object for which he received some apple bits.
2. Philo correctly identified the blue object immediately after he was shown the block and immediately before he was shown the toy car (which was not red).
3. He received the grapes for identifying an object correctly immediately before he was shown the green object. He was shown the green object immediately before he correctly identified the object for which he was given peanuts (which he identified before he was shown the pen).
4. Neither the peanuts nor the walnuts were the treats for the fourth object shown. The peanuts and walnuts were not treats for objects shown consecutively.
