Exceptions

Throwing exceptions

```
throw new ExceptionType();

throw new ExceptionType("message");
```

- Causes the program to immediately crash with an exception.

- Common exception types:
  - ArithmeticException, ArrayIndexOutOfBoundsException, FileNotFoundException, IllegalArgumentException, IllegalStateException, IOException, NoSuchElementException, NullPointerException, RuntimeException, UnsupportedOperationException

- Why would anyone ever want a program to crash?

Exception example

```
public void setLocation(int x, int y) {
    if (x < 0 || y < 0) {
        throw new IllegalArgumentException();
    }
    this.x = x;
    this.y = y;
}
```
